 "Public Comment to OEHA on 6-7-17 - - There Is No Safe Level of Glyphosate - Please Protect Californians and Our Natural Resources from Glyphosate - - Submitted by: - Laura Hayes - - Members of OEHA, you have before you a critically-important decision to make. Do you permit the use of glyphosate, which is now pervasive in the soil in which our food is grown, the water which we drink, the meats and foods which we eat, and the air that we breathe? do you permit this toxic chemical's use at the random rate of 1100 mcg per day per person with no accurate way to monitor or enforce such a rate? and with no accounting for a person's age, weight, health status, types of exposures, or present load of toxins? Or do you permit the use of glyphosate at a lower, but still random rate, which also cannot be accurately monitored or enforced? and again, without personal factors taken into account? Or, do you act on the growing body of evidence that shows that there is no safe level of glyphosate, and declare that its use will no longer be permitted in the state of CA? - - At this point in time, we know that glyphosate is both tumorigenic and carcinogenic, meaning that it causes both tumors and cancer. We know that it causes cancer cells to proliferate, whether it was the original cause of those cells or not. We know that glyphosate is a neurotoxin, meaning that it damages the brain. We know that is an endocrine system disruptor, meaning that it adversely affects hormones causing developmental, reproductive, neurological, and immunological problems. - - We know that glyphosate can substitute for glycine during protein synthesis. I have attached a list from Dr. Stephanie Seneff of MIT which explains the many negative health consequences that result when glyphosate substitutes for glycine during protein synthesis. She considers one of the most serious consequences to be the disruption of digestive enzymes, which can result in autoimmune disease. - - To break things down to a very practical level, here are a few questions to consider: - - 1. If I asked you which apple you wanted to eat, or feed to your child or grandchild, would you choose the one sprayed with poison, i.e. with glyphosate, or the one not - sprayed with poison, the clean and untainted one? - - 2. If I asked you which glass of water you wanted to drink, or give to your child or grandchild, would you choose the one in which glyphosate run-off was present, or the one

without a known carcinogen and known neurotoxin included? - - 3. If I asked you which plate of food you wanted to eat, or give to your daughter or granddaughter who was breastfeeding her newborn, would you choose the plate of food on which the meat, potatoes, vegetables, and roll were all heavily laced with the skull-and-crossbones-labeled glyphosate, whose Monsanto testers wear Hazmat suits when field testing it, or would you choose the plate of food cleanly raised which was grown with no known health hazards? - - 4. Final question, how will you answer your spouse, children, and grandchildren who receive a cancer diagnosis, who struggle with infertility, who suffer from thyroid problems, who are brain damaged in some way, or who succumb to any of the myriad health and development issues now plaguing our population in never-seen-before numbers, when they ask you if you ever permitted anything known to be carcinogenic, neurotoxic, or hormone and endocrine disrupting during your tenure at OEHHHA? - - Each of you knows what the right thing to do is. The question is, will you choose to do it?"Elaine Zacher 95467 CA Alice Newton 94025 CA jeanette dorsey 92107 CA Robert Turek 94070 CA This stuff is BAD and must not be used EVER!Bryan Kelley 91364 CA Carol Schneider 91030 CA Pamela Garvin 95540 CA "Roundup is toxic to people, beneficial insects & our environment.  Schildgen 94703 CA "Glyphosate should not be given a free pass by
 labeling it safe at a very high level, so I urge you not to grant it a No
 Significant Risk classification. There is an increasing body of research
 suggesting that it should not be in this category, and therefore the
 precautionary principle should apply.. I hasten to add that mine is not a knee-
 jerk reaction against agricultural innovation. I come from a farm family in
 Wisconsin that has been at the forefront of progressive agriculture, from the
 introduction of dairy into the state in the 19th century to the establishment of
 a pedigreed Hereford herd to investment in and operation of a large hybrid corn
 company. But I also remember when DDT was in wide use and now-banned herbicides
 were applied everywhere. This is a lesson in agrochemical caution that should be
 not be ignored."Jeff Abare 95628 CA S T 95616 CA "SUPPORT

 McLaughlin 95502 CA "We do not want glyphosate overspray killing our
 native plants and wild pollinators. - We do not want our neighbors' sprayed
 poisonous glyphosate entering our yards, our pets, our children. - We do not
 want to be forced to buy Monsanto food products created from genetic engineering
 - since those seeds allow high concentrations of glyphosate, we want a choice
 which can only exist if the law requires all such products to be clearly

labeled. - You may or may not know that CRISPR Cas-9 gene editing and other ways used for glyphosate resistance, are now known to cause unintended mutations. What we want instead are crops, native species now fragmented from industrial farming using pesticides and herbicides, and the entire cascade of wildlife, all to remain in ecological balance. - The heavy use of glyphosate and other herbicides destroy these linked plant and animal communities, creating niches for MORE noxious organisms, rather than less. - - Please protect our water, our native plants, all pollinators, our pets, children, ourselves, from the excesses of these artificial chemicals, as well as the destructive corporate seed policies that damage organic produce. Monsanto is a criminal corporation, and its practices, both legal and genetic, must be reduced or removed from California."

"OEHHA staff - Think carefully about your course of action. Are you
willing to expose YOUR family, especially the babies and small children of the
people you profess to love, to any amount of the carcinogen glyphosate? Are you
fully aware of all of the potential sources of your family's exposure to
glyphosate? My younger brother died on March 5, 2017 of what the doctors said
was a very ""unusual"" form of cancer. He was in excruciating pain for the last
few months of his life and we had to watch him suffer. He lived near farmland.
At the very least, discharges of glyphosate into sources of drinking water must
be prohibited. Remember, you and your families are not isolated in protective
bubbles that will keep you safe from exposure to glyphosate or any other
carcinogen. You are not just California State officials. You are residents of
California and the safety of all of our families must take precedence over
Corporations who put corporate and personal profits ahead of human welfare. I
know that it is not easy being a government official with a high level of
responsibility for public health and safety. Thank you for accepting this
challenging position. Again, please think carefully about your course of
action. It could mean the difference between life and death for someone you
love." Claire Perricelli 95501 CA "We need to keep toxics out of our

air, soil, water, and food!"Ellen Holmes 94123 CA FORBID SPRAYING AND SALE OF ROUNDUP!Dennis Ely 95030 CA It there no end to greed and honesty!  95118 Mary Courser 92123 I used this and did not realize
 it was toxic. I sprayed weeds and I killed an avocado tree a few feet away that
 had just produced it's first avocado. Even though it was not sprayed close to
 it. :(Don@csstudios.com Wilson 92614 Allen Barker 95023 Ann

 pamela hall 95945 "Glyphosate is already found in rain water! There
 is no safe level of glyphosate. It breaks down to AMPA which is more dangerous
 and does not break down. No Significant Risk does NOT comply with Title 27 of CA
 code of Reg 25703a. NSRL is 1,000's of times higher than level proven to cause
 liver disease, a precursor to cancer, and millions of times higher than level
 to stimulate breast cancer cells. Doesn't consider vulnerability of a fetus,
 baby or child. This is like waging a covert war against people for profit." Roger
 Osborne 96003 Monsanto has proven itself to be a highly
 destructive criminal enterprise. Why even continue to allow it to exist? David
 Nakamoto 91702 Rani saijo 95490 "Please prohibit glyphosate
 discharges into drinking water. Review the epidemiology studies as required by
 law. The health of all of us, our children and grandchildren." Camille Spar
 94062 Phil Hart 92841 No safe levels at all Michele Day-
 Brooks 93405 Let's be clear and honest. There is no safe level of
 Roundup! - - Please state the truth. Robert Snee 97236 Cecilia
 Navarro 92082 Sonia Carlson 92708 Do not increase the

safe human law limits of glyphosate in Monsanto's Roundup herbicide; there are no safe levels of Monsanto's cancer causing Roundup herbicide! Ellen Manko 95062 valerie agnew 94103 Omar Sekandary 92612
